Observatory and telescope:

14" Schmidt-Cassegrain telescope of the Ankara University Kreiken Observatory

Detector:

Apogee ALTA U47+ CCD camera. 1024 x 1024 pixels.

Method of data reduction:

Reduction of the CCD frames and differential photometry were performed with the standard tasks of IRAF¹ package

Method of minimum determination:

The minima times of eclipsing binaries were calculated using Kwee & van Woerden's (1956) method.

[†]Based on the observations performed at Ankara University Kreiken Observatory

¹IRAF is distributed by the National Optical Astronomical Observatories, operated by the Association of the Universities for Research in Astronomy, inc., under cooperative agreement with the National Science Foundation
