A MAGICAL BANNER WITH THE REPRESENTATION OF PARADISE FROM THE TAREQ RAJAB MUSEUM IN KUWAIT

ALEXANDER FODOR

Eötvös Loránd University, Budapest

Introduction

The Tareq Rajab Museum in Kuwait owns an interesting piece of cotton looking like a triangular banner. It is covered with inscriptions and numbers arranged in squares. The calligraphic panels are penned in black ṭūlūṭ, the doubled border lines and the squares are ruled in red. A characteristic sign in writing the numbers is the use of the figure resembling a heart turned upside down for inscribing the number 5. In an upright position with the fly end up and the hoist end down, the central lay-out of the elements in the field shows the figure of a stepped pyramid composed of 8 magic squares (Fig. 1). This structure resembles very much the representation of Paradise in Islamic cosmology that has gained a wide popularity in the 18th-19th centuries. The paper wishes to describe this magical object and tries to shed light on the guiding principles that influenced the arrangement of the texts and the numbers in the squares. As is well-known, banners have always played an important role in Islamic politics, warfare and religion. Starting from the latter point, this study also approaches the subject from the aspects of the relations between Paradise and tomb, Paradise and banner, banner and tomb, banner and magic. As a matter of fact, however, this banner-like object has never been hoisted on a flagpole and has never been used as a real flag. Namely, the traces of folding in the material reveal that it has been meant to be worn as a talismanic chart on the body of its owner for magical purposes.

---

1 This fact might also point to India as the place of origin of the banner.
2 See the colour plates, Plate No II. See also the folded plate at the end of the volume.
3 For banners in the Islamic world in general, see EI1 and EF s.v. “alam, sandjak, sandjak-i sherrif”.

THE ARABIST. BUDAPEST STUDIES IN ARABIC 30 (2012)
https://doi.org/10.58513/ARABIST.2012.30.2
Description of the banner

Catalogue number: TEX 004
Length (fly): 406 cm
Height (hoist end): 246 cm
Depth of the bend in the hoist end: 43 cm
Place of acquisition: India
Date: cca 18\textsuperscript{th} century

The banner has been sewn together from 4 pieces of cotton. When folded, it measures ca. 30 x 25 cm.

Inscriptions

All the inscriptions have been chosen from the Qur’ān. At the first sight interestingly, but as we shall see, applying a definite pattern, the position of the letters is the opposite of the direction of the numbers. If we read the text in front of us, the numbers appear turned upside down and vice versa. The text starts in the right corner of the hoist end and ends in the apex shaped fly end. It contains the following Qur’ānic verses (Q 48/1-26):

1. We have given you a clear \textbf{victory},
2. That God may forgive you your past sin and your sin which is to come, and that He may complete His blessing to you and guide you on a \textbf{straight path},
3. And that God may help you with mighty help.
4. [It is] He who sent down the reassurance into the hearts of the believers that they might add faith to their faith – \textit{to God belong the hosts of the heavens and the earth;} God is Knowing and Wise –
5. That He may admit the believers, men and women, \textbf{to gardens through which rivers flow,} in which they will remain for ever, and that he may redeem their evil deeds for them. That is a mighty triumph with God.
6. And that He may punish the hypocrites, both men and women, and those, both men and women, who associate others with God,

\textsuperscript{4} Qur’ānic verses are quoted in the translation of Alan Jones (Q 2007).
\textsuperscript{5} For an explanation of text in bold characters see the “Commentary” below.
who think evil thoughts about God,
Against them is the evil turn of fortune.
God is angry with them and has cursed them
and has prepared for them Jahannam
– an evil journey’s end.

7. **To God belong the hosts of the heavens and the earth.**
   God is Mighty and Wise.
8. We have sent you as a witness
   and a bearer of good tidings and a Warner,
9. That you may believe in God and His messenger
   and support Him and revere Him
   and glorify Him morning and evening.
10. Those who swear allegiance to you
    are swearing allegiance to God.
    **The hand of God is above their hands.**
    Whoever breaks his oath breaks it against himself;
    but whoever fulfils the covenant he has made with God,
    He will give him a mighty wage.
11. The bedu who were left behind will say to you,
    ‘Our possession and households kept us busy;
    so seek forgiveness for us.’
    They say with their tongues
    what is not in their hearts.
11a. Say, ‘Who possesses anything that will avail you against God,
    if He desires harm for you or desires benefit for you?
    No. God is informed of what you do.
12. No. You thought that the messenger and the believers would never return
to their households.
    That was made to seem fair in your hearts.
    You had evil thoughts and you were a corrupt people.’
13. Those who do not believe in God and His messenger
    – We have prepared a **blaze** for the unbelievers.
14. **To God belongs the sovereignty of the heavens and the earth.**
    He forgives those whom He wishes
    and punishes those whom He wishes.
    God is Forgiving and Compassionate.
15. Those who were left behind will say,
    when you set out to take spoils,
    ‘Let us follow you’,
    wishing to alter God’s words.
Say, ‘You shall not follow us.
Thus God has spoken previously.’
They will say, ‘No. You envy us.’
No. They understand only a little.

16. Say to the *bedu* who were left behind,
‘You will be summoned against a people of great might,
whom you will fight or they will surrender.
If you obey, God will give you a fair wage;
but if you turn away as you did before,
He will punish you most painfully.’

17. There is no blame on the *blind* or on the *lame* or on the *sick*
– those who obey God and His messenger
will be admitted by Him to *gardens,*
through which *rivers* flow;
but those who turn away
– He will punish them most painfully.

18. God was pleased with the believers
when they swore allegiance to you under the tree,
and He knew what was in their hearts.
And so He sent down reassurance to them
and rewarded them with a *victory near* at hand,

19. And numerous spoils to take.
God is Mighty and Wise.

20. God has promised you numerous spoils to take,
and has hastened these to you,
and has restrained the hands of the people from you.
[This is] so that it may be a sign to the believers
and that He may guide you on a *straight path.*

21. And other [spoils] that you were not able to take
are encompassed by God.
God has power over everything.

22. If those who disbelieve had fought you,
they would have turned their backs;
and then they would find no protector or helper.

23. That is God’s practice,
which has happened in the past.
You will not find alteration in God’s practice.

24. [It is] He who has restrained their hands from you
and your hands from them in the valley of Mecca,
after He had made you **victors** over them.  
God is observer of what you do.

25. [It is] they who disbelieved and barred you from the **Sacred Mosque**  
and [barred] the offering which was prevented from reaching its place of sacrifice.  
And had it not been for the believing men and women,  
whom you do not know,  
lest you should have trampled on them,  
and guilt befallen you unwittingly because of them  
– that God may admit to His mercy those whom He wishes.  
Had they been clearly separated.  
We would have punished the unbelievers among them most painfully.

26. When those who disbelieved set fierceness in their hearts,  
the fierceness of the age of ignorance,  
and God sent down his reassurance to His messenger and to the believers.  
and fastened on them the word ‘piety’,  
to which they have the best right and are worthy of it.  
God is aware of everything.

Here, the text of the Sūra is cut short abruptly since the last three Verses (Q 48/27-29) are missing, probably due to lack of space. After this, however, the Qur’ānic inscription is completed by the very popular Verse (Q 61/13) which reads: “help from God and a victory near”. The word *Allāh* is left out, probably due to lack of space.

**1 Squares in the centre (starting from beneath, the hoist end of the banner)**

**1.1 Square 40 x 40**

The square is composed of 1600 numbers arranged in 100 squares of 4 x 4. The first component is placed in the upper right corner, directly under the *Basmala* introducing the Qur’ānic text. The numerical value of each line in these units is the same horizontally, vertically and perpendicularly. The squares of 4 x 4, however, can be divided into different groups according to the characteristic numerical value of their numbers. These values can be the following in the order...

---

6 See the folded table at the end of the volume.  
7 Naturally, several mistakes committed by the copyist can be detected in the arrangement of the numbers.
of their occurrence: 29224, 29226, 29220, 29218, 29214, 29234, 29214 and the last one is again equal to 29234. As we can see, each of the 4 x 4 squares is composed of 2 different groups of numbers (with 8 numbers in each). The arrangement of the numbers in the 2 groups follows a well defined pattern shown by Figs. 2, 3.

In the starting square, the difference between the two sequences (6540, 6541, 6542, 6543, 6544, 6545, 6546, 6547 and 8065, 8066, 8067, 8068, 8069, 8070, 8071, 8072) is 1518 (8065 – 6547). This difference is diminishing gradually by 16 from one square to the next. In the last square (left corner, below), the difference disappears and a continuous sequence of 16 numbers appears in the small rectangles (7301- 7316). The decrease of the numbers of the first group and the increase of the numbers in the second group is illustrated on Fig. 4 by the diminution of the black component in the squares and finally by its total disappearance in the last square.

Fig. 2.
Fig. 3.
Fig. 4.
This square is composed of 400 numbers (using the numerals from 1 to 300) arranged in 25 squares of 4 x 4. The organizing principle is the same as in the 40 x 40 square. The numerical value of each line is the same horizontally, vertically and perpendicularly (apart from the copyist’s occasional mistakes). The squares can be divided into 2 groups on the basis of their numerical values: each of the first 10 quadrates give the sum 602 while each of the remaining 15 has 802. The arrangement of the 16 numerals in 2 different groups follows the pattern in the 40 x 40 square. The difference between the two sequences in the first square is 285 which gradually decreases and finally disappears in the last square where the order of the numbers gives the following sequence: 193 – 208.

</table>

The square has 256 rectangles and uses the numbers from 1-247 which are arranged in 16 squares of 4 x 4. The method of arrangement is again the same as in the case of the square of 40 x 40. The difference between the 2 groups (1 – 8 and 240 – 247) in the first square is 232. This is decreased by 16 from one square to the next and the final square presents the sequence of numbers from 112 to 127.

This square has 121 numbers and uses the numbers from 1 – 11 as they appear in this order in the first line. Each line contains these numbers but in a different arrangement. The organizing principle is based on the following method: In every line following the first one, the number 1 starting the sequence is forwarded by 2 places, the sequence is continued until the end of the line and then the remaining numbers are placed at the beginning of the same line. The total sum of the numbers horizontally, vertically and perpendicularly is 66, the equivalent of the numerical value of the letters of the word *Allāh*.

</table>

The square is composed of 4 squares of 4 x 4 created by 2 different sequences of numbers. The numerical value of the numbers in each of the squares horizontally, vertically and perpendicularly is 630. The 36 numbers contain the numbers from 126 to 189. The difference between the 2 groups of numbers in the first square is 56 which gradually disappears until the sequence of 150 – 165 appears in the last square.

1.6 Square 6 x 6

<td>33</td>
</tr>
</tbody>
</table>
The square contains the numbers from 1 to 36. The numerical value of the numbers horizontally, vertically and perpendicularly is 111, the equivalent for the numerical values of the letters of the word *kāfī* (‘Sufficient’, one of the ‘Most Beautiful Names’ of God).

### 1.7 Square 4 x 4

```
9  3  7  1
6  2  8  4
3  9  1  7
2  6  4  8
```

The numerical value of the numbers horizontally, vertically and perpendicularly is 20 which is equivalent to the numerical value of the words *wadūd* (‘Devoted’, one of the epithets of God) and *budūḥ* (corresponding to the even numbers 2, 4, 6, 8 in the basic 3 x 3 square composed of the numbers 1-9). Seemingly, the square uses the numbers from 1 to 4 and from 6 to 9. Each of these numbers appears twice. In the original square, however, the number 5 is shown at the end of the second line instead of 6. It is difficult to decide whether this was a mistake on the part of the copyist or it was done on purpose. Namely, if we leave the 5 in its place, the numerical value of its lines is 19, a favourite symbol for the *Basmala* written in 19 letters.

### 1.8 Square 3 x 3

```
21 28 23
26 24 22
25 20 27
```

The numerical value of the numbers horizontally, vertically and perpendicularly is 72 which might stand for *bāsiṭ* (‘Extending’, one of the ‘Most Beautiful Names’ of God).
2. Squares on the left side (starting from beneath, the hoist end of the banner)

2.1 Square 3 x 3

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>3</td>
<td>8</td>
</tr>
<tr>
<td>5</td>
<td>7</td>
<td>9</td>
</tr>
<tr>
<td>6</td>
<td>1</td>
<td>4</td>
</tr>
</tbody>
</table>

The square is almost identical with the basic 3 x 3 square, called also *budūḥ* as a reference to the letters that can stand for these even numbers (*b, d, w, h*). The only difference is that in the original form the number 5 is placed in the centre. The change must have been made on purpose since the same arrangement occurs in all of the similar squares that are represented on the banner. The square is placed under the *Basmala* which starts the Qur’ānic text.

2.2 Square 5 x 5

This square uses the numbers from 1 to 25. The numerical value of each line horizontally and vertically is 65.

The square contains the numbers from 1 to 100. The numerical values of the lines is varying, most of them are 505.
The numerical value of the numbers horizontally, vertically and perpendicularly is 10036. The arrangement of the numbers shows certain regularities: the numbers in the rectangles from 3 to 6 present sequences and in a similar way, the numbers in the 2 rectangles on the right and on the left are also sequences. The direction of the order of the numbers in the sequences is changed in every 2 consecutive lines (from left to right and vice versa).

2.8 Square 3x 3

See above Square 2.3 (3 x 3)
2.9 Square 6 x 6

The square contains the numbers from 1 to 36. The numerical value of the numbers horizontally, vertically and perpendicularly is 111, the equivalent for the numerical values of the letters of the word kāfī ('Sufficient', one of the ‘Most Beautiful Names’ of God). For a different version with the same numerical value, see Square 6 (6 x 6) above in the Centre.

2.10 Square 4 x 4

The square uses 2 groups of numbers (201 – 208 and 243 – 250) according to the geometric pattern applied in the 40 x 40 and other squares. The numerical value of each line horizontally, vertically and perpendicularly is 902.

</table>

The numerical value of the numbers horizontally, vertically and perpendicularly is 9462. As for the orthography of the word Allāh, we may note that the letter lām is written only once, probably in an effort to avoid writing three vertical strokes.
Commentary

1. As a magical object, the banner belongs to the group of the so-called talismanic charts and talismanic shirts that are characterized by the presence of an enormous quantity of numbers arranged in squares and inscribed on cotton, paper or gazelle skin (Maddison & Savage-Smith 1997:106-123). The present banner distinguishes itself by the peculiar arrangement of the squares in a stepped pyramid form which resembles a well-known form of representation of the Islamic Paradise. However, not only the geometrical form, but also the accompanying Qur’ānic Sūra (Q 48) is a perfect choice to connect the banner to the idea of Paradise. This frequently used Sūra, called al-Fatḥ, ‘The Victory’ was revealed on the occasion of the Ḥudaybiya Treaty. Seemingly, it was a setback for the Muslims who wanted to perform the Pilgrimage in the year 628 but could not because they were returned by the Qurayš and agreed to postpone it to the next year. The Prophet, however, considered it as a great victory for the cause of Islam as is evident from the text of the Sūra.

So, this piece of Revelation was very appropriate to convey the good news about immediate victory. The message must have been very important for the owner of the banner. Apart from the references to this victory in the Sūra (e.g. ‘victory’, ‘victory near’, ‘victors’, ‘the hand of God is above their hand’, indicated by bold characters in the text), there are other expressions that evoke the idea of the Paradise (‘gardens through which rivers flow’, ‘gardens’, ‘rivers’).

The references to Hell, the opposite of Paradise, can also be found (‘Jahannam’, ‘an evil journey’s end’, ‘blaze’). Finally, there is a hint to ṣirāṭ mustaqīm, the ‘Straight Path’ which separates Paradise from the Hell.

The cosmological aspect in the arrangement of the text on the banner is further emphasized by the occurrence of the declaration ‘to God belongs the hosts of heavens and the earth’ (twice) in the border band which contains the first eleven verses, so symbolically and practically surrounds Paradise which is above the seventh heaven according to Islamic cosmology.8

2. If we look for parallels for the stepped pyramid constructed from the magic squares in the central field of the banner, we can find the best illustration for it in the Ma’rifetnāme, the famous Encyclopaedia written by Ibrāhīm Ḥaqqī in the 18th century (Fig. 5).9 The illustration shows the eight stepped pyramid symbolizing Paradise with sidrat al-muntahā, the ‘Lotus Tree of the Boundary’ painted in gold. On the right side, the liwāʾ al-ḥamd, ‘the Banner of Glory’

---

8 For Islamic cosmological ideas, see EI (1st and 2nd edition) s.v. ‘djanna’, ‘djahannam’.
9 See the colour plates, Plate No. III. The photo is taken from a Manuscript of the Ma’rifetnāme in the Tareq Rajab Museum in Kuwait (not catalogued).
painted in red represents the Prophet’s banner. In the centre, the Ka‘ba is shown separating the seven heavens and the seven earths. At the lower part of the picture, we see Gahannam, Hell represented by an abyss enclosed between two seven stepped sides. The Tree of Hell painted in black – in sheer contrast to the golden Tree of Paradise – is also represented. Above Hell, we can see the širāt mustaqīm, the ‘Straight Path’. Evidently, the pictures of Paradise and Hell complement each other, as the stepped pyramid can be inserted into the abyss of Hell. Accordingly, the two components together suggest the idea of perfect unity. The popularity of this sacred or magical cosmology in the 18th – 19th centuries is also attested by a similar picture of Paradise and Hell in a Ḥilya of the Tareq Rajab Museum which contains the description of the Prophet’s physical and moral qualities and was dated to 1819 A.D. (Fig. 6.)

Practically, the quest for this unity can be discovered in the structure of the squares, in the simultaneous decrease and increase of the two groups of numbers composing the numerical sequences in the squares of 40 x 40, 20 x 20, etc., the arrangement of the sequences in alternately opposite directions (Square 2.7). The reverse directions of the position of the letters in the text and of the numbers in the squares also illustrate the complementary character of the unity.

In a way, the border band inscribed with the Qur’ānic text (with reference to God as the Lord of the hosts of heavens) surrounding the field of the banner symbolizes the constant element in the cosmos, while the squares with the numbers in perpetual movement stand for the active manifestation of God in the world. The ardent belief in the unity of the world is best exemplified by the squares with numerical values that symbolize God (Squares 1.4, 1.6, 1.7). This whole construction created in a very meticulous way can be best interpreted on the basis of reverse analogy: All the symbolic movements in the squares are characterized by the reverse directions in the sequences.

In addition to this, the geometrical representations of these magic squares give the onlooker the possibility to view them as manifestations of a special art form and look at the constructions as tessellations. Accordingly, the squares of 4 x 4 can be considered as geometrical forms that are fitted exactly together to create a two-dimensional plane with no gaps between them. This characteristic is further enhanced by the fact the last (fourth) number in the first line of each square is continued by the number coming after it in the first rectangle of the next square. (So, for example, 6547 is followed by 6548 in the first two components of the Square 40 x 40, etc.)

If we turn to the arts to find illustrations for the above mentioned features in the squares: the use of reverse analogy, the play with the opposites (like the

---

10 See the colour plates, Plate No. IV.
black and white on Fig. 4), the merging of the contrastive elements, the idea of unity in the world, we can discover them in the works of the Dutch graphic artist, M.C. Escher. His famous woodcuts and lithographs like the “Sky and Water I, II”, the intarsia panel for the Leiden Town Hall, the “Day and Night”, the “Fishes”, the “Encounter” might give a clue to perceive the world view hidden in the seemingly boring magic squares.

In the Islamic world, the best and most enthusiastic exponents of this cosmological system characterized by the ceaseless search for the manifestation of God in the unity of the world were the Ṣūfīs (Nasr 1968:92-97, Cammann 1969a:201, Fodor 2002, 2006).

3. There is a clear evidence which shows that the banner must have been made for a member of the Šī'ite community. The Square of 3 x 3 on the right side completed by the names of ʿAlī, Fāṭima, Muḥammad, Ḥasan and Ḥusayn reveals the evident Šī'a background. Apart from this, some other elements, in a way hidden, might also indicate this Šī'ite character. Concerning the characteristic number in the first Square (40 x 40), 40 has a special importance for the Šī'ites, too. Arba'īn, ‘Forty’ is the name of the important event when the Šī'ites commemorate the martyrdom of Ḥusayn on the 40th day after ʿAṣūrā on Ṣafar 20 when millions of Šī'ites make the pilgrimage to Kerbela. According to Šī'ī belief, a prophet after his death can stay on the earth for forty days before he is lifted up to the heaven (al-Muqarram 1979:132, n.1.). A 40 day fasting is also a frequent prescription for magical practices (Ibn Ḥaṭīr ad-Dīn, Ġawāhir 345-352). The use of a special group of 40 names termed al-asmā’ al-idrīsiyya, ‘the Idrisid Names’ attributed to as-Suhrawardi is considered a powerful device in magic (as-Suhrawardi, Ḥawāṣṣ).

The banner in itself enjoys a distinguished place in Šī'ī tradition. According to it, the Prophet gave his standard to ʿAlī during the battle of Ḥaybar (aṭ-Ṭabarī, Manāqib 142). More important than this is the tradition which claims that the Prophet promised ʿAlī that he would carry the Prophet’s standard (liwā’ al-hamd, ‘the Banner of Glory’) on the Day of Resurrection and the People of God will march in its shade. Finally, ʿAlī clothed in the garment of Paradise will be honoured by a place in the shade of the Throne between Abraham and the Prophet (aṭ-Ṭabarī, Manāqib 184-186). This ‘Banner of Glory’ had also an inscription in three lines: the Basmala, the ʾSchāda and the ʾHamdala (al-ḥamdū li-l-lāhi rabbi l-ʿālamīn, ‘Praise be to God, Lord of the Worlds’) (al-Muqarram 1979:185).

---

11 Most of his works are exhibited in the Escher Museum in The Hague.
The triangular form of the banner indicates that its origin should be sought in the Eastern part of the Islamic world, namely in Mughal India or Persia. The form is not of Arabic origin (Kratchkowskaya 1937:468) but occurs very often on illustrations coming from these regions. To cite but a few examples, the characteristic triangular banners painted in different colours on illustrations usually depicting battle scenes, can always be discovered. In the Ottoman world, banners of rectangular form became popular as we have seen the representation of the Prophet’s banner on the picture illustrating the Universe in the *Ma’rifetnāme*. Even in modern popular representations of Šī‘ī religious scenes we can discover the triangular banner painted in red. It appears, e.g. on a coloured print depicting the battlefield at Kerbela (Dayal & Schulz 2009: Fig.31).

4. There is a definite connection in Šī‘ī imagery between the stepped pyramid as the symbol of Paradise and the stepped tomb with a palm branch over it. On a magic bowl from India (Fodor 2006), probably from the North and datable to the 18th century, on the exterior, the tomb of Ḥusayn is depicted as a four stepped edifice with a palm branch inside a mosque (*Fig. 7*). The accompanying Qur’ānic text (Q 2/257) makes it clear that the tomb symbolizes Paradise (‘God is the protector of those who believe. He brings them out of the darkness into the light’) while on the opposite side of the bowl, *Dū l-Faqār*, the Sword of ‘Alī stands for Hell (‘Those who do not believe – their protectors are idols. They bring them out of the light into darkness. They are the companions of the Fire, in which they will dwell for ever’).

We may also cite another example for the representation of a stepped tomb with three storeys topped by a dome which allegedly belonged to Abraham (*Fig. 8*). The picture decorates a magical manuscript on talismans which might come from the Delhi Sultanate or Central Asia and can be dated to the 15th century (Christie’s, 2002:28, Lot 25).

It is worth noting that people in the Šī‘ī processions commemorating ‘Āšūrā carry models of Ḥusayn’s tomb made from wood or paper in the form of stepped pyramids (Dayal & Schulz, 2009, Figs. 20-24).

5. Although the banner with its exclusively Qur’ānic text and the squares gives the impression of a piece of strictly orthodox religiousness without any indication of a magical character, there are some words in the Qur’ānic verses which

---

12 For the 16th century, see e.g. Thompson & Canby 2003: 97 (No. 4.14); 120 (No.4.32); 128 (No 4.36). For the 17th century, see Lukonin & Ivanov 1996: CAT. No. 214.
13 See the colour plates, Plate No. V.
14 See the colour plates, Plate No. VI.
might, however, imply a magical connotation. The simple occurrence of the expressions ‘no blame on the blind’, ‘no blame on the lame’, ‘no blame on the sick’ or the verb ‘envy’ might be taken as a sign of intent to guarantee the protection of the holder of the banner against these calamities. This might be corroborated by the use of another expression which has a definite prophylactic character: dā’irat as-sū’, ‘the evil turn of fortune’ will afflict those who ‘think evil thoughts about God’ (Verse 6). The notion of dā’ira, ‘circle’ in itself is considered as a powerful magical device for protecting the good and containing the bad.

In connection with the magical use of the banner and the Sūrat al-Fatḥ, it is worth to quote a passage from a highly interesting magical work of Šīṣī character. It is the previously cited book, Kitāb al-Ğawāhir al-Hams written by Sīdī Muḥammad ibn Ḥaṭīr ad-Dīn ibn Bāyazīd Ḥawāğa al-ʿAṭṭār, a Šūfī author who lived in India in the 16th century15. Speaking about the uses of a famous invocation called ad-Duṭā as-sayfī, ‘The Invocation of the Sword’, the book mentions that ‘he who writes it with the Sūrat al-Fatḥ and rolls it up in wax, then hangs it on rāyat al-Imām, ‘the banner of the Imam’ (ʿAlī), and confronts the enemy, his enemy will be defeated without doubt’ (Ğawāhir 303).

6. Summing up what has been said above, we can come to the conclusion that the banner might have belonged to a member of the ŠīṢīa, who might have been an adherent of a Šūfī ṣārīqa in India, possibly, the Niʿmatullāhi order16. Very probably, he was not a simple warrior but a warlord who could have taken part in military campaigns. Judged by the quality of the banner, the fine craftsmanship manifested in the execution of the work, the owner must have belonged to the upper class. As a soldier, he must have been in great need of a protective device not only to defend him in the battlefield but also to assure him the admittance to Paradise in case of his death.

15 The book was banned in Egypt a few years ago because of its magical contents.
16 For the relationship between Šūfism and the ŠīṢīa, see Nasr 2008.
