(Received 5 July 2017; published 27 July 2017)

The legends in the original Fig. 6 mislabeled the curves. As indicated in the corrected version shown here, the triangles depict the doped case ($n = 0.722$), and the square symbols depict the half-filled case ($n = 1.0$). The description of the figure in the text is correct, and this error does not affect the other results or the conclusions of the paper.

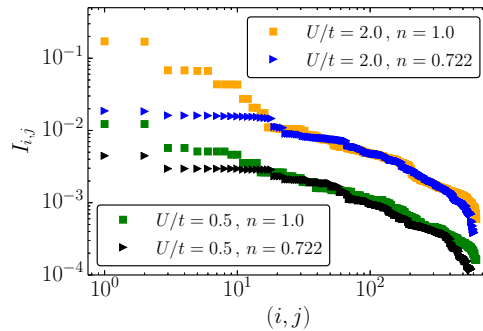

FIG. 6. Two-site mutual information $I_{i,j}$ for the ground state of the 6×6 Hubbard model in momentum space for different U values and different fillings n. The values are sorted in descending order. We include only unique entries of $I_{i,j}$, i.e., take $i > j$.
