MODERN NUMERICAL METHODS IN ENGINEERING

Colecția "MATEMATICI MODERNE"

EDITURA POLITEHNICA
TIMIȘOARA - 2012

CONTENTS

PREFACE	5
CONTENTS	7
FIRST PART	
Ch. 1. AN INTRODUCTION TO MATHEMATICA	14
1.1. Initial notions.....	14
1.1.1 The structure of <i>Mathematica</i>	15
1.1.2 Basic notions.....	17
1.1.2.1. Set of characters. Symbols and numbers	17
1.1.2.2. Keywords under <i>Mathematica</i>	19
1.1.2.3. Getting information	20
1.1.2.4. Messages.....	21
1.1.2.5. Program packages.....	21
1.2. Structured objects.....	22
1.2.1. Lists	22
1.2.2. Functions.....	23
1.2.3. Expressions. Rules of transformations.....	25
1.3. Processing objects in <i>Mathematica</i>	28
1.3.1. Processing simple objects.....	28
1.3.2. Processing lists.....	30
1.3.3. Vectors and matrices.....	37
1.3.3.1. Operations with matrices.....	38
1.3.3.2. Operations with vectors.....	41
1.4. Graphics in <i>Mathematica</i>	42
1.4.1. 2D graphical representation.....	43
1.4.2. 3D graphical representation.....	48
1.4.3. Parametric representation of curves and surfaces.....	52
1.5. Programming elements under <i>Mathematica</i>	55
1.6. References.....	59
Ch. 2. AN INTRODUCTION TO MATLAB	60
2.1. Initial notions.....	60
2.2. Commands with general effect.....	61
2.3. Commands used to control the variables.....	62
2.4. Predefined constants and variables in MATLAB.....	66
2.5. File-types in MATLAB.....	67
2.6. Programming elements in MATLAB.....	68
2.7. Loops (for, while) and conditional instructions.....	70
2.8. Graphics in MATLAB.....	74
2.9. Symbolic and numeric computations in MATLAB.....	79

2.10	References.....	86
Ch. 3	AN INTRODUCTION TO MATHCAD	87
3.1.	Mathcad basics.....	87
3.1.1.	Mathcad Resource Window.....	87
3.1.2.	Mathcad worksheets and regions.....	88
3.1.3.	The Mathcad toolbar.....	88
3.2.	Mathematical expressions.....	89
3.2.1.	Ways to calculate the expressions.....	92
3.2.2.	The format used in editing and typing numerical data.....	93
3.2.3.	Numerical calculus with units of measurement.....	95
3.3	Mathcad document editing.....	96
3.4.	Range, index and array variables.....	97
3.5.	Matrices and vectors.....	100
3.5.1.	Creating matrices and vectors.....	100
3.5.2.	Indices for matrices and vectors.....	100
3.5.3.	Operations with vectors and matrices.....	102
3.5.4.	Parallel calculations.....	105
3.6.	Mathcad 2D and 3D plots.....	105
3.7.	Symbolic computations in Mathcad.....	107
3.8.	Elements of Mathcad programming.....	110
3.9.	References.....	112
Ch. 4	NUMERICAL METHODS FOR SOLVING SYSTEMS OF LI- NEAR EQUATIONS	113
4.1.	Direct methods.....	115
4.1.1	The Gaussian elimination method.....	117
4.1.2	The L U decomposition method.....	121
4.2.	Iterative methods.....	125
4.3.	Applications.....	131
4.3.1	Solving systems of linear equations in <i>Mathematica</i>	131
4.3.2	Solving systems of linear equations in MATLAB.....	132
4.3.3	Solving systems of linear equations in Mathcad.....	135
4.4.	References.....	139
Ch. 5	NUMERICAL METHODS FOR SOLVING NONLINEAR EQU- ATIONS AND SYSTEMS OF NONLINEAR EQUATIONS	140
5.1.	Methods for nonlinear equations.....	141
5.1.1	The bisection method.....	142
5.1.2	The regula falsi method.....	145
5.1.3	Newton's method.....	147
5.1.4	The secant method.....	149
5.1.5	Fixed point methods.....	150
5.2.	Methods for systems of nonlinear equations.....	151

	5.2.1 Successive approximation methods.....	153
	5.2.2 Newton-type methods.....	157
5.3.	Applications.....	161
	5.3.1 Solving nonlinear equations and systems of nonlinear equations in <i>Mathematica</i>	161
	5.3.2 Solving nonlinear equations and systems of nonlinear equations in MATLAB.....	163
	5.3.3 Solving nonlinear equations and systems of nonlinear equations in Mathcad.....	167
5.4.	References.....	172
Ch. 6.	POLYNOMIAL INTERPOLATION. FUNCTION APPROXIMATION	173
6.1.	Lagrange and Hermite interpolations.....	173
	6.1.1 The Lagrange polynomial interpolation.....	173
	6.1.2 The Hermite polynomial interpolation.....	176
6.2.	Least squares approximation.....	179
6.3.	Interpolation with spline cubic functions.....	181
	6.3.1 Cubic spline functions with end point conditions.....	184
	6.3.2 Periodic cubic spline functions.....	186
	6.3.3 Natural cubic spline functions.....	187
6.4.	Applications.....	189
	6.4.1 Polynomial interpolation with <i>Mathematica</i>	189
	6.4.1.1. Commands.....	189
	6.4.1.2. Solved problems.....	190
	6.4.2 Polynomial interpolation under MATLAB.....	197
	6.4.2.1. Commands.....	197
	6.4.2.2. Solved problems.....	199
	6.4.3 Solved problems for polynomial interpolation using Mathcad.....	203
6.5.	References.....	206
Ch. 7.	NUMERICAL METHODS FOR SOLVING DIFFERENTIAL EQUATIONS AND SYSTEMS OF DIFFERENTIAL EQUATIONS	207
7.1.	General aspects. Method of successive approximations.....	207
7.2.	The direct numerical method (unistep).....	211
	7.2.1 The Taylor numerical method. The Euler methods.....	211
	7.2.2 The Runge-Kutta methods.....	216
7.3.	The indirect numerical method (multistep).....	228
	7.3.1 The Adams-Bashforth method.....	229
	7.3.2 The Adams-Moulton method.....	230
	7.3.3 The predictor-corrector method. The Adams-Bashforth-Moulton method.....	232

10 Contents

7.4.	Applications.....	238
7.4.1	Solving equations and systems of differential equations under <i>Mathematica</i>	238
7.4.1.1.	Commands.....	238
7.4.1.2.	Solved problems.....	240
7.4.2	Solving equations and systems of differential equations with MATLAB.....	244
7.4.2.1.	Commands.....	244
7.4.2.2.	Solved problems.....	246
7.4.3	Solving equations and systems of differential equations with Mathcad.....	250
7.5.	References.....	253
SECOND PART		
Ch. 8.	GLOBAL METHODS TO SOLVE SYSTEMS OF NONLINEAR EQUATIONS	256
8.1.	Homotopy continuation analysis.....	257
8.1.1	Definition of homotopy.....	257
8.1.2	Solving nonlinear equation via homotopy.....	258
8.1.3	Tracing homotopy path as initial value.....	261
8.1.4	Types of linear homotopy.....	264
8.1.4.1.	Fixed point homotopy.....	265
8.1.4.2.	Newton homotopy.....	265
8.1.5	Start system for polynomial systems.....	265
8.2.	Gauss-Jacobi combinatorial method.....	270
8.2.1	Linear systems.....	270
8.2.2	Nonlinear systems.....	272
8.3.	Parallel computation.....	276
8.3.1	Implementation of homotopy method in <i>Mathematica</i>	276
8.3.2	Parallel computation in <i>Mathematica</i>	278
8.4.	References.....	281
Ch. 9.	FUNDAMENTAL PRINCIPLES OF THE FINITE ELEMENT ME- THOD (FEM)	283
9.1.	Introduction to FEM.....	283
9.2.	Topological properties in the FEM.....	286
9.3.	Local and global systems of coordinates. Interpolation functions.....	291
9.4.	Energetical and numerical methods in FEM. Galerkin's Method.....	298
9.4.1	Energetical methods in FEM.....	298
9.4.1.1.	The principle of apparent mechanical work (apparent displacements).....	299
9.4.1.2.	Potential energy theorem.....	300
9.4.1.3.	Approximation calculus (Numerical methods) in FEM Galerkin's Method.....	300

9.5.	Mathematical simulation in engineering by FEM.....	307
9.5.1	Determination of a beam displacements subject to an axial force by FEM.....	307
9.5.1.1.	Assembling Process.....	311
9.5.1.2.	Assembling according to the nodes.....	312
9.5.1.3.	Assembling according to elements.....	315
9.5.1.4.	Implementation of boundary conditions.....	317
9.5.1.5.	Numerical solving in MATLAB.....	322
9.5.1.6.	Numerical solving in Mathcad.....	328
9.5.2	The analysis of the displacements in mechanical systems with springs by FEM.....	329
9.5.2.1.	Numerical solving in MATLAB.....	335
9.5.2.2.	Numerical solving in Mathcad.....	338
9.5.3	The analysis of temperature distribution in a conductive thermal field by means of Galerkin's method.....	339
9.5.3.1.	Numerical solving in MATLAB.....	346
9.5.3.2.	Numerical solving in Mathcad.....	348
9.5.4	The temperature distribution analysis in a conducting wire by variational calculation	350
9.5.4.1.	Numerical solving in MATLAB.....	359
9.5.4.2.	Numerical solving in Mathcad.....	361
9.5.5	The analysis of the plane structure displacements by FEM.....	366
9.5.5.1.	Numerical (digital) solving in MATLAB.....	374
9.5.5.2.	Numerical solving in Mathcad.....	378
9.5.6	Determination of the permanent parallel plane movement rate by Galerkin's method.....	382
9.5.6.1.	Numerical solving in Mathcad.....	389
9.6.	References.....	399
Ch. 10.	AN INTRODUCTION TO BOUNDARY ELEMENT METHOD (BEM)	400
10.1.	General aspects. Direct and indirect formulations of the boundary element method.....	400
10.2.	One-Dimensional Problems Solved by BEM.....	405
10.2.1	The Method of Influence Functions. Applications of the Indirect Boundary Element Method (IBEM).....	405
10.2.1.1.	The Method of Influence Functions.....	405
10.2.1.2.	Application of the Indirect Boundary Element Method (IBEM).....	409
10.2.1.3.	The simple beam problem by IBEM.....	416
10.2.2	Application of the Direct Boundary Element Method Comparison between IBEM and DBEM.....	425
10.3.	Two-dimensional problems solved by BEM.....	439
10.3.1	Potential Flow Basic Equations. Indirect-BEM Application.....	439
10.3.1.1.	Basic Governing Equations. Singular Solutions.....	439

12 Contents

10.3.1.2. Indirect Boundary Element Method (IBEM) for a Homogenous Region.....	442
10.3.2 Direct Boundary Element Application (DBEM) for a Homogenous Region; Equivalence of IBEM and DBEM Methods.....	450
10.3.2.1. Calculation of Internal Potentials and Velocities.....	460
10.3.2.2. The Equivalence of Indirect and Direct Boundary Element Method Analysis IBEM and DBEM.....	461
10.3.3. Concluding Remarks.....	462
10.4. Some Developments in Applicability of CVBEM (Complex Variable Boundary Elements Method).....	464
10.4.1 Some Developments of CVBEM at Mixed Boundary Value Problems for Laplace Equation.....	464
10.4.1.1. Introduction.....	464
10.4.1.2. CVBEM Development.....	465
10.4.1.3. Treatment of singularities.....	468
10.4.1.4. Solution of the Mixed Boundary Values Problem (BVP) by CVBEM.....	572
10.4.1.5. Conclusions.....	475
10.4.2 CVBEM Developments to Obtain the Analytic Solution to the Poisson equation in Plane Domains.....	475
10.4.2.1. Introduction. Basic formula.....	475
10.4.2.2. An illustrative example.....	479
10.4.2.3. Conclusions.....	481
10.5. References.....	482
