Taxonomy

Kingdom	Phylum	Class	Order	Family
Animalia	Chordata	Mammalia	Chiroptera	Vespertilionidae

Taxon Name: *Myotis borneoensis* Hill and Francis, 1984

Common Name(s):

- English: Bornean Whiskered Myotis

Taxonomic Source(s):

Görföl, T., Estók, P. and Csorba, G. 2013. The subspecies of *Myotis montivagus* – Taxonomic Revision And Species Limits (Mammalia: Chiroptera: Vespertilionidae). *Acta Zoologica Academiae Scientiarum Hungaricae* 59(1): 41–59.

Taxonomic Notes:

This taxon was generally regarded until recently as a subspecies of *M. montivagus* but was elevated to species rank based on morphology and morphometrics by Görföl *et al.* (2013).

Assessment Information

Red List Category & Criteria: Data Deficient [ver 3.1](#)

Year Published: 2017

Date Assessed: July 2, 2016

Justification:

This species is listed as Data Deficient as it is known only from a few specimens and we have very few information on its distribution, abundance, ecology or threats.

Geographic Range

Range Description:

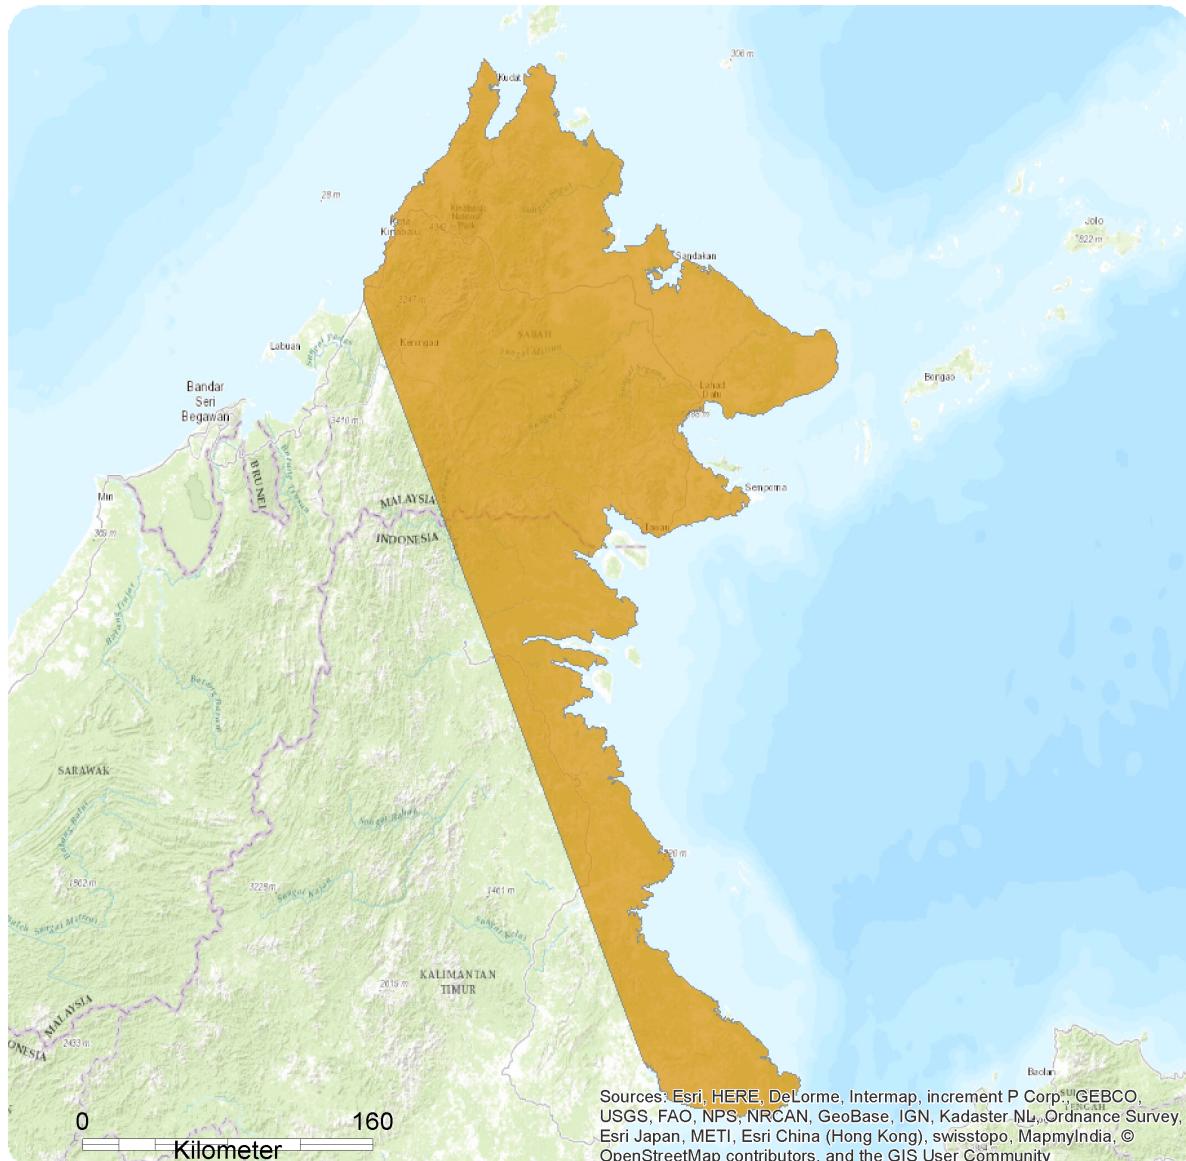

Myotis borneoensis is confined to Borneo. It occurs in Sabah, Malaysia (Hill and Francis 1984, Payne *et al.* 1985, Yasuma and Andau 2000 in Francis *et al.* 2008), Sarawak (Wilson *et al.* 2006), and also in Kalimantan, Indonesia (Suyanto and Struebig 2007).

Country Occurrence:

Native: Indonesia (Kalimantan); Malaysia (Sabah, Sarawak)

Distribution Map

Myotis borneoensis

Range

Extant (resident)

Compiled by:

IUCN (International Union for Conservation of Nature)

The boundaries and names shown and the designations used on this map do not imply any official endorsement, acceptance or opinion by IUCN.

Population

The species is known from only a handful of specimens from Borneo.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

Payne *et al.* (1985) and Wilson *et al.* (2006) recorded the species alongside forest streams, whereas specimens collected in Kalimantan emerged from a cave in a karst area.

Systems: Terrestrial

Threats (see Appendix for additional information)

The species may be a cave-dweller (Görföl *et al.* 2013), hence the disturbance of caves is a threat to the species. It was captured in tall forest; logging of forests may be also a threat.

Conservation Actions (see Appendix for additional information)

No conservation actions are known to be in place for this species.
