**Abstract:** This paper discusses Early Byzantine clasps in the form of peacock, which occurred in modern Abkhazia and Kartli. These brooches date from the sixth and seventh centuries and meet with parallels among synchronous mediaeval antiquities. Peacock brooches discovered in the Southern Caucasus were imported directly from Byzantium. These finds indicate connections of the population of the Southern Caucasus and the Byzantine Empire.

**Keywords:** Southern Caucasus and Byzantium, brooches, Byzantine influence

This paper discusses Early Byzantine clasps in the form of peacock, which occurred in the Southern Caucasus (*Fig. 1–4*). Small zoomorphic brooches were well known in the Caucasus in the Great Migration Period (from the last third of the fourth to the second third of the sixth century AD).<sup>1</sup> These brooches in the Caucasus belong to the big group of small bird-shaped brooches which existed in Europe from the mid-fifth to mid-seventh century. They belong to female attire and were widespread in Western Europe, in the Middle Danube area, on the Balkans, and in the Caucasus.<sup>2</sup> Besides, there were big bird-shaped brooches, finery and trappings with encrustation, featuring another morphology and popular among the Eastern Germanic peoples in Spain and Italy,<sup>3</sup> as well as along the Danube and in the Carpathians, particularly in the Pietroasele treasure and in the “princely” grave of Apahida II.<sup>4</sup> All the listed types of brooches reflect international female fashion from the fifth to mid-seventh century and, obviously, originate from common Late Roman prototypes. Actually, the image of bird of prey, specifically of eagle, often occurred among the Roman symbols, which were imitated by barbarians.<sup>5</sup>

However, the bird-shaped brooches include several outstanding pieces featuring not a feathered predator but unaggressive peacock (*Fig. 5. 1–3*). These brooches depict a bird with crested head, elongated body, and long oval tail. In the Southern Caucasus, I know only three finds of brooches of the type: two pieces originate from the territory of modern Abkhazia, from cemeteries of Tsibilium-2 and Shapka-Yustinianov Kholm-3, and the third piece comes from the territory of Kartli, from Samtavro (*Fig. 4*).

The excavation on the cemetery of Tsibilium-2, at the footstep of the famous fort of Tsebelda, in the north-eastern area of the Tsebelda valley (Gulripsh area), which formed a part of ancient Apsilia, uncovered inhumation grave 282, with the burial of a teenager girl<sup>6</sup> whose head was oriented to the west (*Fig. 1.1*). The grave contained a

brooch featuring peacock with elongated body, long oval tail, crested head, and the wing decorated with oval green glass inset (Fig. 1.2). There is no information on the location of this brooch in the grave. The burial was accompanied with numerous beads of various types made of glass, carnelian, and amber (Fig. 1.3–8).<sup>7</sup> Taking the grave goods into account, there are reasons to date this grave to Stage IV/10–11 of the Abkhazian timeline, corresponding to AD 530/550–640/670.<sup>8</sup>

The second peacock brooch, which form is absolutely the same as that of the previous artefact, was excavated from grave 4 in the cemetery of Shapka-Yustinianov Kholm-3,<sup>9</sup> in the south-western area of the Tsebelda valley (Gulripsh area) (Fig. 2). This grave contained an inhumation, with the head oriented to the north (Fig. 2.1). On the chest of the skeleton there was a bronze brooch depicting peacock with elongated body, elongated oval tail, and crested head; its tail and wing were decorated with oval insets of light blue glass. Overall size of the brooch is 4.5 cm<sup>10</sup> (Fig. 2.2.A,B).<sup>11</sup> This grave also contained grave goods typical of female burials: silver and bronze bow fibulae with wide back-plate and crossbar, glass, carnelian, and amber beads, bronze bracelets and pendant earrings, bronze toilet set and fragments of a needle-case including bronze needles, bronze bell, iron knife, and ceramic vessels (Fig. 2.3–22). The excavators have dated this burial to the third quarter of the seventh century.<sup>12</sup> Olga Gei and Igor Bazhan have related this grave to Period 8 of their chronology, corresponding to AD 425–450.<sup>13</sup> However, cross-like brooches of the latest variant (Fig. 2.15–18) and pendant earrings (Fig. 2.3–5) suggest that the most probable chronology of this assemblage is AD 530/550–640/670, i. e. Stage IV/10–11 of the Abkhazian timeline.<sup>14</sup>

The third find is a bird-shaped brooch from grave 578 in the year 1946 from the cemetery of Samtavro in Mzkheta in Kartli in the ancient Iberia (Fig. 3).<sup>15</sup> General outline of the bird's body and the crest on its head allow me to relate this brooch to the group of peacock brooches, though in contrast to Abkhazian finds its tail is sub-tra-

pezium, and it does not have elongated body nor inset decoration (*Fig. 3.1*). From the cross-shaped brooch of an early form (*Fig. 3.2*)<sup>16</sup> there are reasons to relate this burial to the finds from Stage III/5–8 in the Abkhazian timeline, corresponding to AD 380/400–440/450.<sup>17</sup>

The style of these three brooches greatly differs from other bird-like ornaments from the Central Caucasus, so they “fall out” the general group of Caucasian finds. Yurii Voronov was the first to underline that these bird-like brooches were Late Roman/Byzantine and met with parallels in the Eastern Mediterranean area.<sup>18</sup> Actually peacock is one of the favourite motifs of the Early Byzantine decorative art, where it symbolised eternity and revival, and also emperor’s power. Images of peacock often occurred on metal artefacts of other types (*Fig. 6.1–4*; *Fig. 7.1–3*).<sup>19</sup>

Fig. 5. Peacock brooches in the Transcaucasia (1–3) and their Mediterranean parallels (4–7). 1: Tsibilium-2, grave 282 (according to VORONOV 2007, Fig. 133,8); 2: Shapka-Yustinianov Kholm-3, grave 4 (according to – A: Воронов–Юшин 1973. рис. 13.21; B: author's photo, the collection of the Abkhazian State Museum); 3: Samtavro, grave 578 of the year 1946 (according to АПХАЗОВА 1979, табл. IX.2); 4: Baron Johannes von Diergardt's Collection at the Roman-Germanic Museum, Köln (according to WERNER 1961, Taf. 49.322); 5, 6: Invillino (according to MARTIN 1994, Abb. 162.4,5); 7: Villa Lagarina (according to BIERBRAUER 2008, Abb. 5.3)

Similar brooches are well known in the Mediterranean, particular in Italy, where they are considered typical Mediterranean (Romanian) pieces (Fig. 5.4–7).<sup>20</sup> Most probable is Yurii Voronov's suggestion that peacock brooches in the Southern Caucasus were imported directly from Byzantium. In the Northern Caucasus, no peacock brooch has been found so far. It is interesting to note that in the Southern Caucasus a few finds of peacock brooches appeared in the areas (Iberia, Apsilia) that kept permanent and varied contacts with Byzantium (Fig. 4).

It should be mentioned that ornaments depicting peacocks came into the hands of barbarians who lived far away from Byzantine borders. As Anatolii Ambroz has shown once,<sup>21</sup> zoomorphic images on brooches from the Martynovka treasure in the Dnieper area (Fig. 6.4)<sup>22</sup> represent bird's heads. Martynovka brooches laid the foundation for a big series of anthropo- and zoomorphic brooches from the Dnieper area.<sup>23</sup> This famous treasure originates from the forest-steppe area on the right bank of the Dnieper.<sup>24</sup> It belonged to the Penkovka culture people, e. g. Slavic-speaking Antae, and dates most likely from the last third or the end of the sixth century.<sup>25</sup>
